Hiring Manager  
JPMorgan Chase & Co.

Dear Hiring Manager,

I am applying for the Applied AI Engineer position at JPMorgan Chase. My background in AI/ML development, multi-agent systems, and RAG-powered applications makes me well-suited to contribute to your team.

At DevTechAI, I built and deployed RAG chatbots and CrewAI multi-agent systems, improving information retrieval accuracy by 40% and workflow efficiency by 30%. I also developed secure, production-ready backends with FastAPI, OAuth, and database integration, reducing HR processing time by 25%.

As AIML Lead at Google Developer Student Clubs, I organized events for 2000+ students, mentored 150+ learners in Google Cloud and GenAI, and strengthened my leadership and communication skills. My academic and project work includes a Text2SQL system for banking data with enterprise security (RBAC, SQL injection prevention, audit logging) and an AI-powered tutoring system that reduced query latency to under 2 seconds.

I am excited about JPMorgan Chase's focus on applied AI in financial services and would welcome the opportunity to contribute by developing scalable, secure, and business-driven AI solutions.

Thank you for your time and consideration.

Sincerely,  
Yandapalli Adithya Vardhan Reddy
